

Lab 01 REPORT

Ronney Aovida

The exercises performed today included downloading/installing the R console and R studio, we then proceeded to try it by doing some simple math. We then created 3 scripts in R studio that performed the following tasks:

Script 1, hello.R:

This script practices the use of using the print statement.

Script 2, ratio.R:

This script computes the ratio of two numbers and outputs the results.

Script 3, ratio.R:

This script creates a plot according to the two parameter arrays created stated as variables x and y. A line plot is then created when it is run.
